GIF to Flash Converter is a program with a title that pretty much explains its functionality - it allows you to convert GIF files to Flash animations (SWF) but also to AVI videos and image sequences. It can be easily used by individuals of any experience level. Intuitive interface and import method The interface of the application is plain and simple to navigate through. GIF

animations can be imported via the file browser only, because the "drag and drop" method is not supported. Batch processing is not allowed. Trim clips and add effects So, all you have to do is specify the output destination and proceed with the conversion task. But you can also configure output settings when it comes to the format, frame delay, frame size, bit rate and frame rate. Additionally, you can trim clips by marking the first and last

frame, preview GIFs in a built-in player, as well as make image adjustments (e.g. brightness, contrast, saturation) and apply filters (e.g. sharpen, blur, flip). Settings can be restored to their default values. To end with The simple-to-use program runs on a moderate amount of system resources, has a good response time, quickly finishes a task and manages to keep a very good image quality in the output videos. We haven't come across

any issues during our tests, since GIF to Flash Converter did not freeze or crash. There's also a brief help file that you can look into. Too bad that batch processing is not supported. Otherwise, we strongly recommend GIF to Flash Converter to all users.
