Background on Maltego The Maltego project was started in 2011 by Raj Amit Nain. A previously deployed technology is an open source open source information extraction engine called LinkedData. While the world of SOA and SaaS was revolutionizing around them, Raj saw a need to build a web-based enterprise application to be able to explore and connect data in a variety of platforms. To achieve this, he decided to heuristically extract information from web pages using LinkedData to search and discover the data. Maltego is a distributed software system that consists of server-side components including server, transforms and daemons. It is written in Java, and uses Apache Tomcat as the web server.
